Michael Kapler

Investment exp. since
2009
1998

Strategy overview

- The Portfolios aim to protect against large market downturns while still allowing for capital appreciation, which can translate to smoother wealth growth.
- The Portfolios invest in a diversified set of assets, including equities, high yield bonds and floating rate loans, for growth.
- Always-on risk reduction options strategies are implemented against aggressive growth assets to limit losses from volatile markets.
- Emphasis on higher dividend paying stocks and exposure to high yielding fixed income assets help generate sustainable income for investors with cashflow needs.

Performance Commentary

The quarter began on a challenging note for equity and fixed income markets as hopes for interest rate cuts by the Federal Reserve dwindled amid persistent inflation concerns. However, as the quarter drew to a close, there was a notable improvement in sentiment as inflation cooled, increasing investor confidence that the Federal Reserve (Fed) could lower rates as early as September. Despite the Fed's indication of expecting only one rate cut this year, risk assets stabilized and regained lost ground, benefitting from continued economic growth and strong performance from mega-cap information technology companies.

Equities exposure through the portfolios' allocation to the Mackenzie Global Equity Income Fund was the largest contributor to performance. Its 2.4% return was driven by U.S. equity stocks, primarily from a still-surging technology sector. Relative to its benchmark, the fund modestly underperformed. Its dividend focus dragged on returns as dividend paying stocks, like financial institutions and energy companies, lagged growth-oriented technology stocks. Canadian equities also dragged on returns as the Canadian equity market moved in the opposite direction of foreign markets, delivering a small loss for the period. The stock options strategy within the fund, designed to preserve capital during times of severe equity market stress, added value as equity markets fell sharply in May.

The Mackenzie Canadian Bond Fund was the best returning fixed income fund in the portfolios. Returning 1.1%, an overweight to corporate bonds, security selection within financial and energy sectors, and short exposure to Japanese government bonds led to benchmark relative outperformance. The Mackenzie Unconstrained Fixed Income Fund, was the second largest contributor to returns. Corporate bond selection in industrial, energy and financial sectors in concert with strong duration management and selection of government bonds added value.

A small contributor to performance but of notable interest, the Mackenzie Gold Bullion Fund, held as an inflation sensitive asset, returned 5.8%. Geopolitical uncertainty coupled with strong central bank and Asian buying interest have boosted the price of gold this year.

Portfolio Management Activities and Outlook

Underlying fund allocations are consistently managed across time horizons. This stability in exposures reduces the possibility of being wrong at the wrong time, helping ensure that the appropriate amount of risk mitigation is present when needed most. From a market view perspective, though global equity markets appear expensive, positive macroeconomic and technical factors, including solid corporate earnings growth, the likely end of rate hikes by the Fed, low U.S. recession risk, economic rebounds in Europe and China, and optimism from artificial intelligence themes will likely continue to support this asset class.

The team remains cautious on bonds in the near term, particularly U.S. government bonds. U.S. interest rates likely remain elevated as the Fed continues to monitor inflation and economic data before committing to any rate reduction policy.

Commissions, trailing commissions, management fees, and expenses all may be associated with mutual fund investments. Please read the prospectus before investing. The indicated rates of return are the historical annual compounded total returns as of June 30, 2024 including changes in share value and reinvestment of all distributions and does not take into account sales, redemption, distribution, or optional charges or income taxes payable by any security holder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated. Index performance does not include the impact of fees, commissions, and expenses that would be payable by investors in the investment products that seek to track an index.
